Table R-3. Distribution of the ground-truth classes of the KU-PCP test photographs. For example, 124 photographs are in the *RoT* class. Among them, 71 have a single ground truth class (*i.e.*, *RoT*), 10 have the *center* class additionally, 39 have the *horizontal* class additionally, and so on. Since some photographs have 3 ground-truth classes, a total can be smaller than the corresponding row sum.
